

## How to Fit

Jacaranda's carpets should always be installed by professionals. They may stretch carpet onto double grippers over good quality solid underlay. Carpets may also be stuck directly to the floor or fitted over underlay using the double stick method. Self adhesive carpet protector should not be applied as it can pull threads when removed.

Please note that in some hand-woven cut & loop carpets, the lines may run out along seams. For this reason the position of any seams should be planned with care. Many Jacaranda broadlooms are available in 5m as well as 4m widths, to reduce the need for seams.

Hand-woven velvets are finished by hand, so pile heights can vary slightly and a light shear may occasionally be necessary along seams.
